Survey Expert

CASE STUDY I – DOCUMENT MANAGEMENT SYSTEM

Client

Client is a private bank in India.

Business Challenge

Implementing an automated solution for Document Storage, archival, retrieval, search (meta data) of documents that are presented to the bank from various sources. The archival solution required to pull the documents into the archival storage using pre-defined rules.

CASE STUDY II – DOCUMENT MANAGEMENT SYSTEM

Solution Offered

- Full text and content search for document
- Employees get Authenticated access to the documents according to accessibility rights
- Documents are moved at different file storage area on the basis of creation date.
- Speeding up of document retrieval process
- Easily Availability of documents from anywhere and anytime
- Applied audit policy for create, delete, update, check-in/checkout the document
- Retention policy applied on documents
- After implementing DMS, it automatically encrypted the document and stored into the file store

Technology Stack

Documentum 6.0 SP1Suite of Products. Microsoft Windows 2008 Server, Oracle, Apache Tomcat

CASE STUDY III – CONTENT MANAGEMENT SYSTEM

Client

Client is one of the leading and fast growing private sector financial services company.

Business Challenge

Implementing an automated solution focused on delivering world class and high quality electronic services to facilitate and accelerate client's daily requests, services & workflows, archive historical files & data (incl. Faxes & eMails) with tight integration to office application such as (MS Word, MS Excel) and Active Directory for authentication.

CASE STUDY IV — CONTENT MANAGEMENT SYSTEM

Solution Offered

- Full text and content search for document
- Employee Authentication through Active Directory (no need to maintain a separate user repository)
- Employees get Authenticated access to the documents according to accessibility rights
- Speeding up of document retrieval process
- Easily Availability of documents from anywhere and anytime
- Publishing of Excel Spreadsheets into the solution for online viewing (without the client PC having MS Excel)
- Applied audit policy for create, delete, update, check-in/checkout the document
- Retention policy applied on documents
- After implementing the solution, it automatically encrypted the document and stored into the document repository.
- Integration of Microsoft Word for automated publishing of Blogs.

Technology Stack

Microsoft Sharepoint 2010. Microsoft Windows 2008 Server, MS SQL Server 2008 R2 (64 Bit)
